

Xamime Integration - Type 1

Detailing the methods of integrating Xamime into existing networks

A standard single mail server encompassing all functions...

...with the inclusion of Xamime directly into the existing Mail server, becomes;

The single box solution is idea for situations where the current existing mail server is currently underloaded and/or additional hardware is not warranted.

Advantages:

- No additional hardware costs required
- No alteration of existing clients required
- Add administration still occurs on a single machine

Disadvantages:

- Modification of existing configuration may induce further complexity
- Higher load incursion from CPU and Disk intensive filtering operations
